MASTERNODE SETUP GUIDE

Set Up EVOS Masternode Hot and Cold Wallet

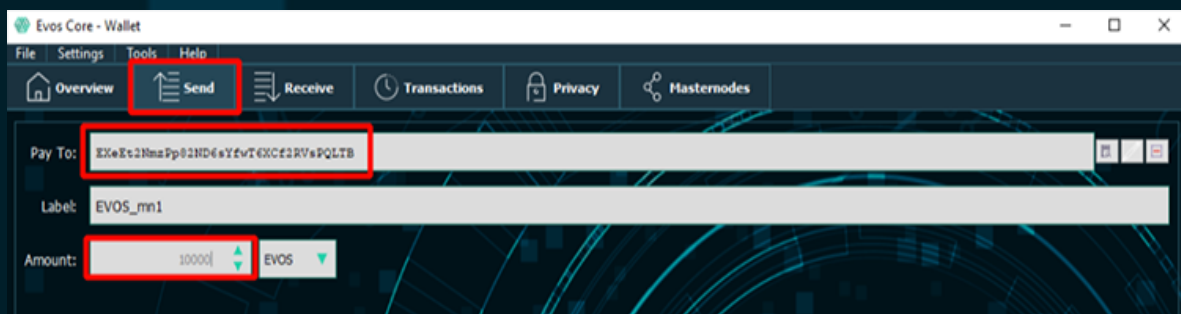

I. Download Windows Wallet and Send Collateral Coin

Download wallet from <https://www.evos.one/> and Run the EVOS-qt

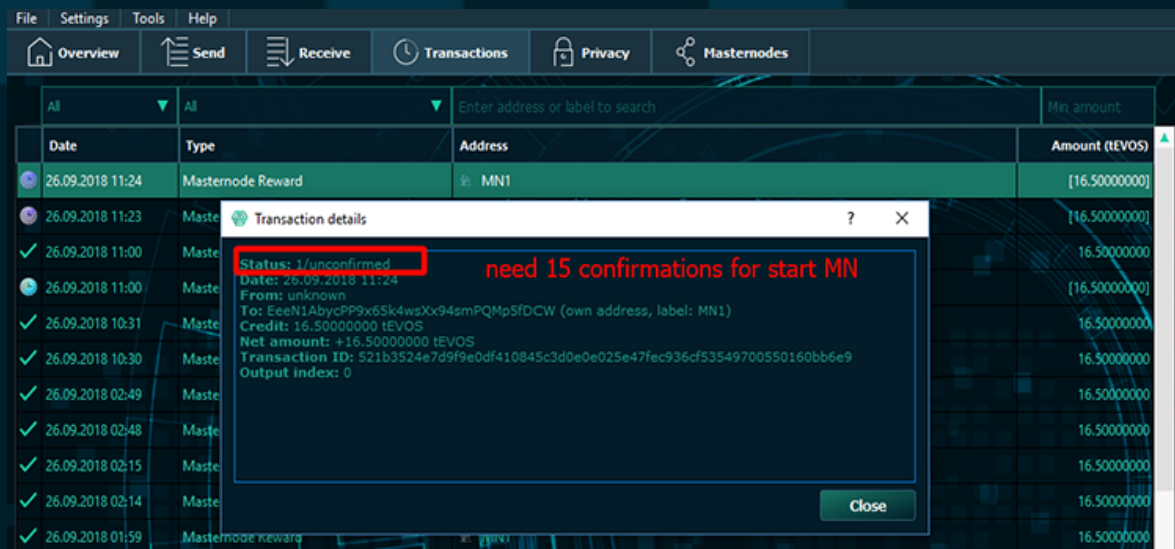

A. Go to Receive menu > Receive page
create and copy new address for collateral

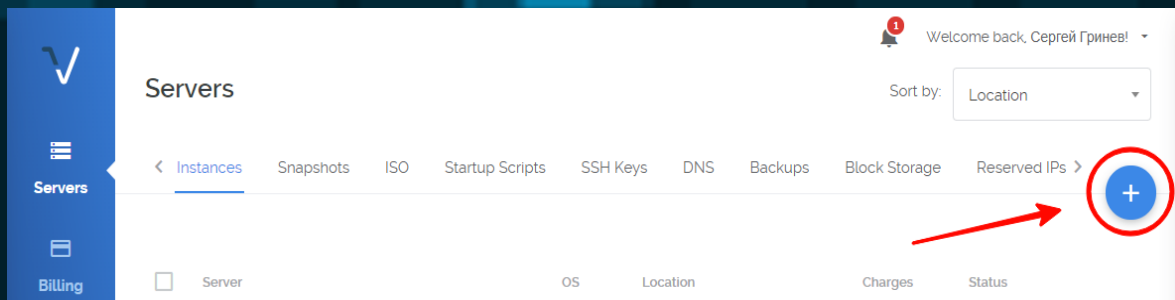

B. Send MN Collateral - 10 000 evos to that Address

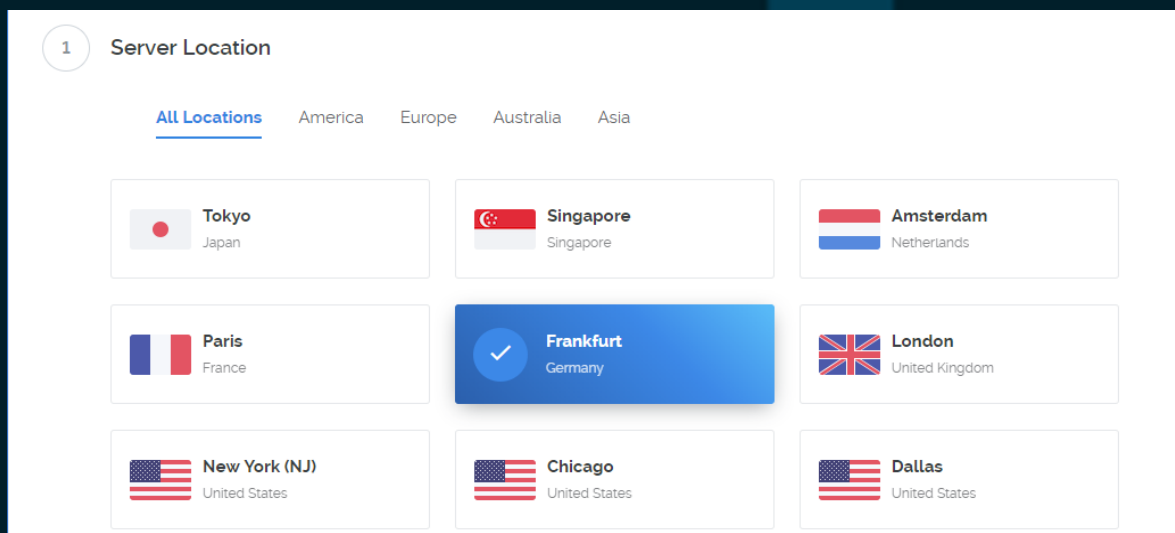

C. While Waiting for the Collateral to get 15 confirmation, do VPS section below

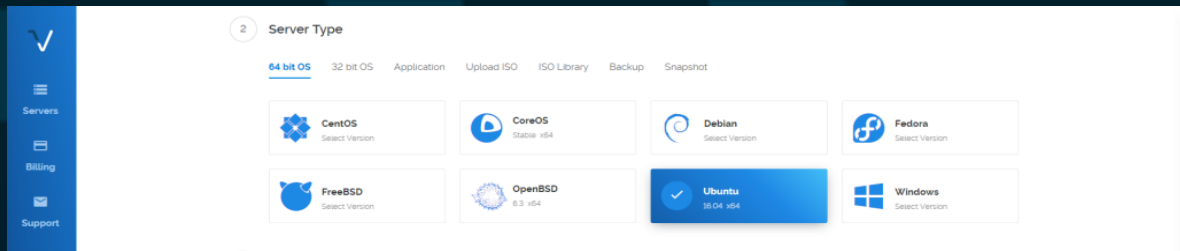

II. Choose a host for your Masternode VPS There are many VPS hosts, so feel free to choose any one you like.
For this guide, I'm going to use Vultr VPS and full disclosure:
Register and Sign in to Vultr <https://www.vultr.com/>
Setup New VPS

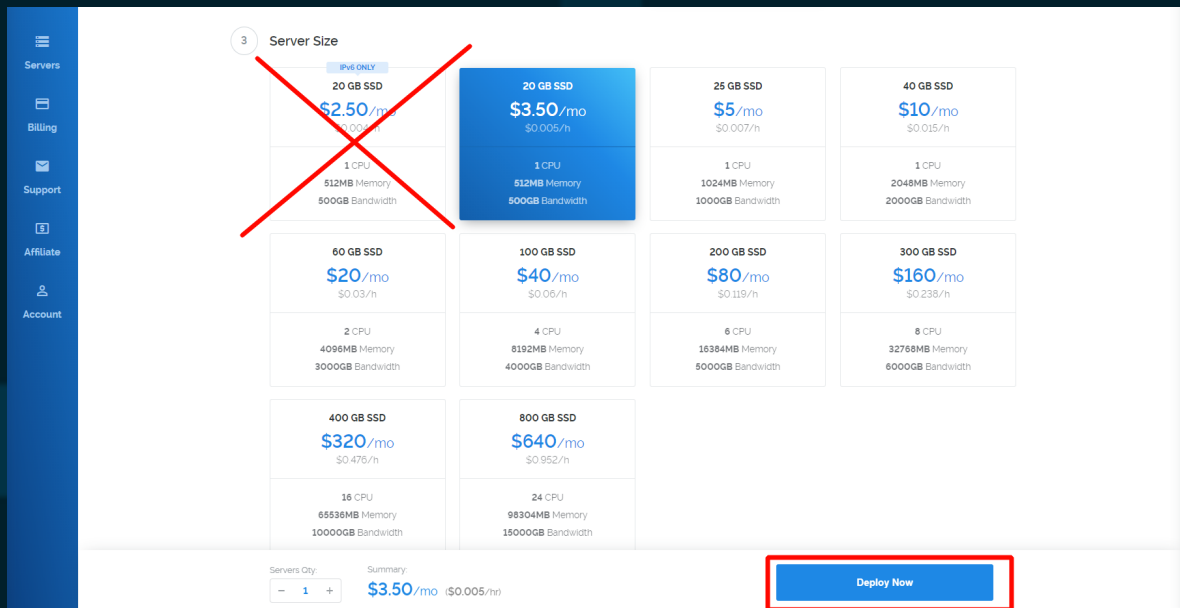

Select any location

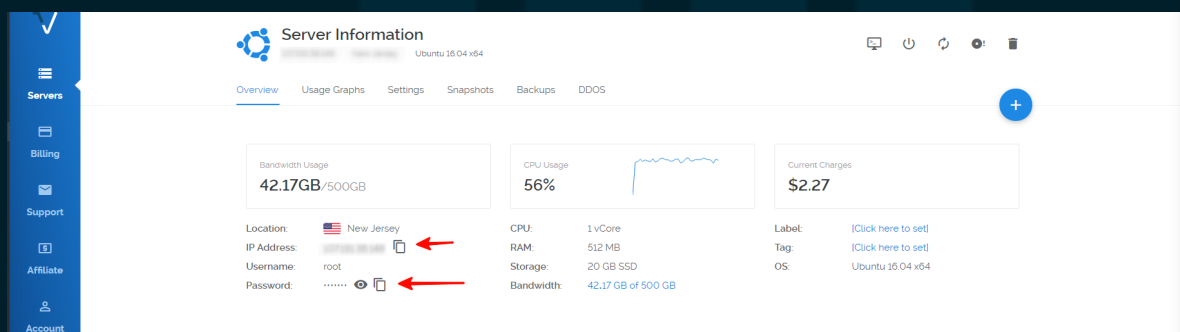

Chose OS and Server

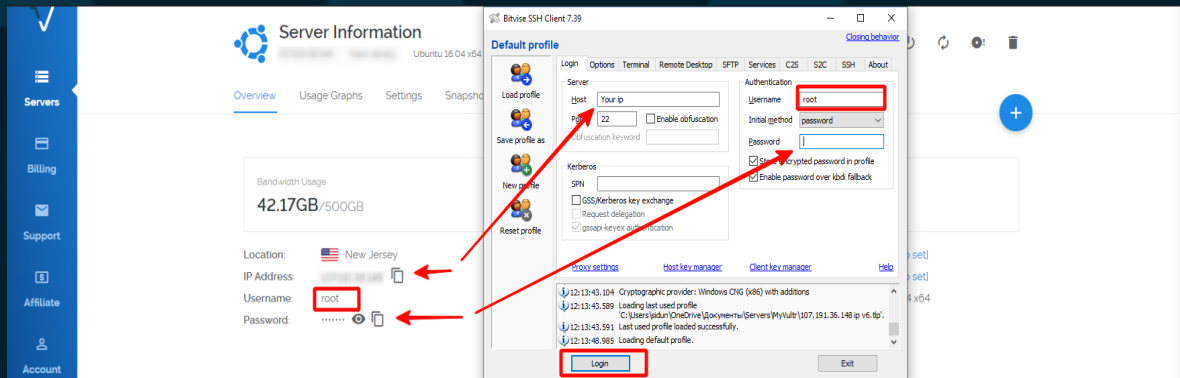

Chose OS and Server

Copy and save:
your ip address server
login - root
password

<https://www.bitvise.com/ssh-client-download>
login your VPS

Copy and past next commands:

```
wget https://github.com/EVOS-DEV/MN-Setup/releases/download/1.0/evos.autoinstall.sh
```

```
bash evos.autoinstall.sh
```

You see

```
----- EVOS MASTERNODE INSTALLER v1.0.0-----+
|
|
| The installation will install and run |::
| the masternode under a user evos.    |::
|
| This version of installer will setup  |::
| fail2ban and ufw for your safety.     |::
|
|+-----+::
|:~::~S
Do you want me to generate a masternode private key for you?[y/n]
```

enter "y" if you want generate new masternode genkey - we use this option

or

enter "n" if you want use your masternode genkey

```
----- EVOS MASTERNODE INSTALLER v1.0.0-----+
```

Copy this data

```

Creating evos.conf...
Evos server starting
=====
Masternode setup is complete!
=====
Masternode was installed with VPS IP Address: 144.202.22.6
Masternode Private Key: 92GY7QRuWkfZmjceUQsrtjHEu8RfLEVUoTeo1JK4nsEW4Xig8zr
Now you can add the following string to the masternode.conf file
=====
EVOS_mn1 144.202.22.6:17345 92GY7QRuWkfZmjceUQsrtjHEu8RfLEVUoTeo1JK4nsEW4Xig8zr TxId TxIdx
=====
Use your mouse to copy the whole string above into the clipboard by
triple-click + single-click (Dont use Ctrl-C) and then paste it
into your masternode.conf file and replace:
    EVOS_mn1 - with your desired masternode name (alias)
    TxId - with Transaction Id from masternode outputs
    TxIdx - with Transaction Index (0 or 1)
    Remember to save the masternode.conf and restart the wallet!
To introduce your new masternode to the evos network, you need to
issue a masternode start command from your wallet, which proves that
the collateral for this node is secured.
*** Press any key to continue ***

```

IV. go to Windows wallet > Tools > Debug console
enter command : **masternode outputs**

copy txhash and outputidx

Go to Windows wallet > Tools > Open Masternode Configuration File

Paste your data from VPS + txhash and outputidx
look like

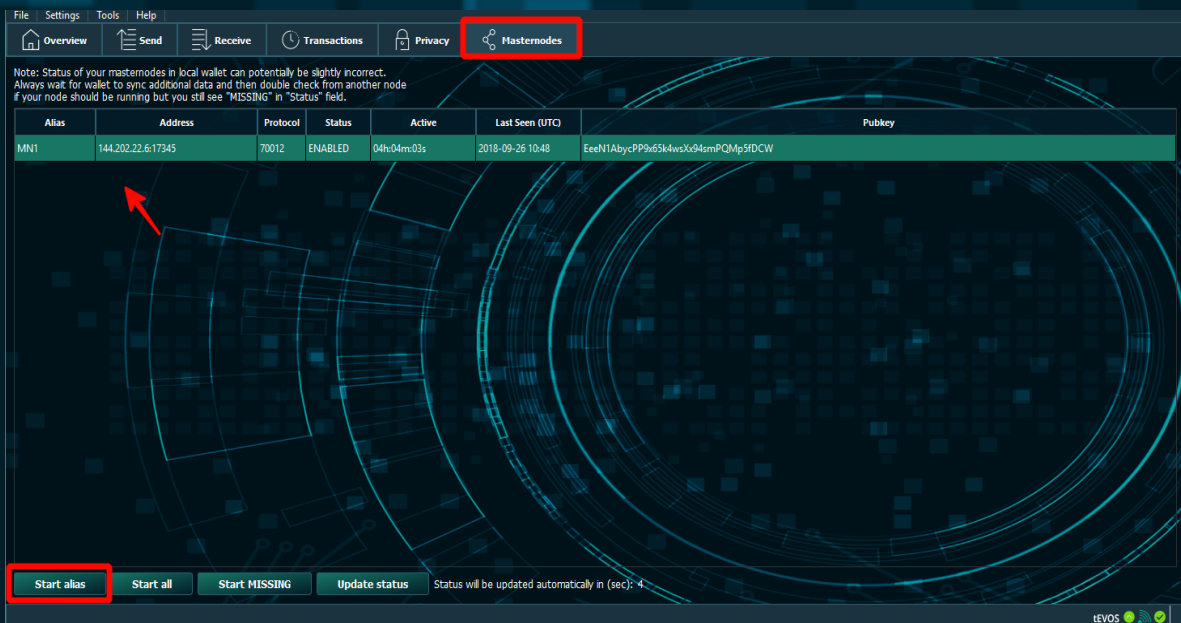

EVOS_mn1 128.256.12.12:17345

92GY7QRuWkfZmjceUQsrtjHEu8RfLEVUoTeo1JK4nsEW4Xig8zr

557762ceecd8e6d590b3ed90d4fdc1b8d43f2f5b5e24d74a8fd84f76852adbd8
0

save, close, restart wallet.

V. Masternode start and check on vps

go to vps console and enter command: `evos-cli masternode status`
if should see "Masternode successfully started"
congratulations!
